

Bag People Fabric Guide

Non-woven Fabric

About Non-woven Fabric

Non-woven fabric is man-made and manufactured using light-weight polymers, as such the end product is immensely strong, durable and easy to work with.

Like all polypropylenes, non-woven fabric can be recycled but does not break down naturally in landfill.

The current manufacturing processes of non-woven has allowed it to become economical enough to produce Reusable Bags that replace Single-use plastic bags.

Non-woven Reusable Bags have probably done more to clean up our environment than any other single element in the last 10 years – while it is not a perfect solution, it has been the most effective thus far.

Non-woven Polypropylene is manufactured using chemical, mechanical, heat or solvent treatment. It is usually pressed with uniform pattern of some type to give it the appearance of a woven fabric.

Non-woven P.E.T. is the common abbreviation for Polyethylene Terephthalate which usually exists as a clear, opaque or white polymer – most commonly used for packaging, primarily water bottles and food containers. Non-woven P.E.T. is made using similar processes to non-woven polypropylene.

Is Non-Woven Fabric Recycled?

Our **Non-woven Polypropylene** contains approximately **30% Recycled Content**.

Our **Non-woven P.E.T.** contains up to **100% Recycled Content**.

Can Non-woven Fabric be Recycled?

Non-woven fabric can be recycled. Contact your local authorities for collection points.

What colours are available?

Non-woven Polypropylene – 21 standard colours available (Pantone colour matching is optional).

Non-woven P.E.T. – White fabric only.

What about Natural alternatives?

If you prefer a completely natural fabric, see our :

- Cotton Bags or Canvas Bags
- Jute Bags
- Recycled Canvas Bags

What about printing?

Non-woven fabric takes screen printing very well and excellent results can be achieved with the simplest designs using very cost-effective print methods.

However, if a most complex print is needed, there are a range of print technologies available that can reproduce photo-quality print results on non-woven fabric.
